# Installing ZixSelect for Outlook 2007

The following document describes how to install and configure ZixSelect for Outlook 2007. For information on the features in ZixSelect, see the **ZixSelect Online Help** by selecting **ZixSelect > Help** from your Microsoft Outlook toolbar.

**Note:** You must uninstall any previous version of ZixSelect before installing this version.

## Prerequisites

To install ZixSelect for Outlook 2007, users must be running a Windows XP or Windows Vista operating system.

## Installing ZixSelect

There are three ways you can install ZixSelect on users' computers:

- By going to each user's computer and installing it using this CD. See [Installing ZixSelect from the CD](#) for more information.
- By placing the file on a Network location and installing it on each user's computer. See [Installing ZixSelect from the Network](#) for more information.
- By silently pushing it to users in a network using a systems management application. See [Pushing ZixSelect to Users](#) for more information.

### Installing ZixSelect from the CD

**To install ZixSelect using the .msi file located on the ZixVPM Documentation Suite CD:**

1. Close any Windows based applications.
2. Insert the ZixVPM Documentation Suite CD into the PC where you want to install ZixSelect.
3. Browse to **\\ZixSelect\\Outlook\\ZixSelect for Outlook 2007** and double-click ZixSelectSetup 4.0.0.7.msi.
4. Click **Next**.
5. Select the ZixSelect buttons you want the user to have available. The choices are:
  - "Encrypt & Send" button only
  - "Send Unencrypted" button only
  - "Encrypt & Send" button and "Send Unencrypted" button
6. Click **Next**.
7. Click **Next** through the standard installation questions.
8. When the install is complete, click **Close**.

**Note:** If you had Outlook open while installing ZixSelect, close and re-open the program.

---

## Installing ZixSelect from the Network

### To install ZixSelect from a Network location:

1. Insert the ZixVPM Documentation Suite CD into a PC with Administrator privileges.
2. Browse to **ZixSelect\Outlook\ZixSelect for Outlook 2007** and copy the ZixSelectSetup 4.0.0.7.msi file.
3. Browse to the Network location you want to place the file and paste it there.
4. From the user's computer:
  - a. Close any Windows based applications.
  - b. Browse to the network location where you placed the file and double-click ZixSelectSetup 4.0.0.7.msi.
  - c. Click **Next**.
  - d. Select the ZixSelect buttons you want the user to have available. The choices are:
    - "Encrypt & Send" button only
    - "Send Unencrypted" button only
    - "Encrypt & Send" button and "Send Unencrypted" button
  - e. Click **Next**.
  - f. Click **Next** through the standard installation questions.
  - g. When the install is complete, click **Close**.

**Note:** If you had Outlook open while installing ZixSelect, close and re-open the program.

## Pushing ZixSelect to Users

### To push the ZixSelect for Outlook 2007 application:

1. Download the installation files from the provided CD to a generic location where you intend to deploy the product from.
2. Deploy the product via a systems management application such as Microsoft's Systems Management Server (SMS) or Microsoft Active Directory. See your systems management application help system for more information on completing this task.

## CHANGING WHAT BUTTONS ARE INSTALLED

By default, when you install ZixSelect on a user's computer, only the **Encrypt & Send** button displays in Microsoft Outlook. If you want to change what buttons display on users' computers when you push ZixSelect via your systems management application, you can:

- **Modify the .msi file**

Using an .msi editor, such as [Easy MSI Editor](#), modify the following value in the .msi file:

Table	Property	Value	Value Descriptions
Property	BUTTON_OPTIONS	1	Enter 1 in the <b>Value</b> field to install the "Encrypt & Send" button only on users' computers. <b>Note:</b> This is the default value.
		2	Enter 2 in the <b>Value</b> field to install the "Send Unencrypted" button only on users' computers.
		3	Enter 3 in the <b>Value</b> field to install the "Encrypt & Send" button and the "Send Unencrypted" button on users' computers.

- **Modify the command line**

If you are using Microsoft Systems Management Server, use the **Repackage Installation Wizard** and enter the following in the **Command-Line Options** box:

Command-Line Options Value	Descriptions
BUTTON_OPTIONS = 1	Enter <b>BUTTON_OPTIONS = 1</b> in the <b>Command-Line Options</b> field to install the "Encrypt & Send" button only on users' computers. <b>Note:</b> This is the default value.
BUTTON_OPTIONS = 2	Enter <b>BUTTON_OPTIONS = 2</b> in the <b>Command-Line Options</b> field to install the "Send Unencrypted" button only on users' computers.
BUTTON_OPTIONS = 3	Enter <b>BUTTON_OPTIONS = 3</b> in the <b>Command-Line Options</b> field to install the "Encrypt & Send" button and the "Send Unencrypted" button on users' computers.

## Adding or Removing the Send Unencrypted Button

The ZixSelect **Send Unencrypted** button allows users to bypass the policies defined in ZixVPM and force an email message to be sent unencrypted. It should only be turned on in special situations where the user is allowed to make the decision to send messages without encryption.

On the user's computer:

1. Go to **Start > Run**.
2. Type **regedit** and press **Enter**.
3. Browse to **HKEY\_LOCAL\_MACHINE > SOFTWARE > ZixCorp > ZixSelectATL**.
4. Double-click one of the following options to change the value in the Value Data field:

selectEnabled	True	<b>Encrypt &amp; Send</b> button on.
	False	<b>Encrypt &amp; Send</b> button off.
unselectEnabled	True	<b>Send Unencrypted</b> button on.
	False	<b>Send Unencrypted</b> button off.
