

Creating a ZixVPM Subdomain Record with GoDaddy

1. Login into your GoDaddy account and navigate to manage your domains. At your Domain Information page click 'Launch' under DNS Manager.

The screenshot shows the GoDaddy domain management interface for the domain STINGERIT.COM. The interface is divided into several sections: Domain Information, Domain Enhancements, Related Products, Nameservers, DNS Manager, and TLD Specific. The DNS Manager section is highlighted with a red circle around the 'Launch' button.

2. Click 'Quick Add' under the MX (Mail Exchanger) section and a new row will appear to enter the information.

MX (Mail Exchanger)		
Priority	Host	Points to
10	@	stingerit.com.s5a1.psmtp.com
20	@	stingerit.com.s5a2.psmtp.com
30	@	stingerit.com.s5b1.psmtp.com
40	@	stingerit.com.s5b2.psmtp.com
0	zixvpm	zixc2.strongport.com
Quick Add		

3. Enter the following information:
 - a. Priority: 10
 - b. Host: zixvpm
 - c. Points To: zixc2.strongport.com
 - d. TTL: 30 Minutes

MX (Mail Exchanger)			Restore Defaults
Priority	Host	Points to	TTL
10	@	stingerit.com.s5a1.psmtp.com	1 Hour
20	@	stingerit.com.s5a2.psmtp.com	1 Hour
30	@	stingerit.com.s5b1.psmtp.com	1 Hour
40	@	stingerit.com.s5b2.psmtp.com	1 Hour
10	zixvpm	zixc2.strongport.com	1/2 Hour Undo
Quick Add			

4. Click 'Save Zone File' in the upper-right corner.

Your ZixVPM Subdomain MX Record has now been created.
